Bookeye® GS400 R2  
Bookeye® Color R2

Since its founding in 1995, ImageWare Components GmbH's portfolio of software and systems has been successively expanded in order to offer complete solutions beyond the **Bookeye®** range of products. Since 1997 this has also included **BCS-2®** as a scanning platform for overhead, flatbed, feed-through and microfilm scanners, with a base of more than 1,000 installations.

**MyBib eDoc**, a web-based document delivery system was launched in 2002. Used by libraries and service companies as a workflow solution for electronic document delivery and digitization of extensive stocks of books, journals and files.

With the most recent product, **C-3**, a solution has been developed to reveal the content of periodicals. **C-3** can be used as a single-user solution with **BCS-2®** or as multi-user solution combined with **MyBib eDoc**.

Together with our customers we develop solutions that allow libraries and archives to digitize and tap into their collection of books and other items, and make it available on the Internet or intranet in high grade form.

## THE SOLUTION FOR FAST AND SIMPLE SCANNING, DISTRIBUTION AND PUBLICATION OF BOOKS, PERIODICALS AND MICROFILMS

- simple and intuitive operation under Windows (2000, XP)
- scanner-independent software (support for all commercially available scanners via Twain and/or ISIS drivers)
- support for microfilm scanners including special applications such as scanning of blipped roll film or microfilm jackets
- scan & email with interface to Outlook, Lotus-Notes and any type of SMTP server
- eCopy package for use as a copying/scanning station in the self-service section
- order processing with indexing
- flexible changeover between different scanners within a job
- multilingual user interface
- choice of output formats: TIFF G4, JPEG, PNG, MTIFF, PDF (optional PDF)
- extensive processing functions such as automatic page split, border removal, barcode- and OCR recognition, single- and multimasking
- add-on modules for service providers such as a journal function for accounting/statistics, batch module for batch processing and background module for parallel processing of jobs
- publication directly on the Internet via **BCS-2<sup>®</sup> Webpublisher**
- publication on microfilm for long-term archiving
- interfaces to electronic document delivery systems Medea3, MyBib eDoc, DOD-1/DOD-2 (subito), ARIEL
- interfaces to library systems Aleph/ADAM, SISIS Sunrise, PICA CBS/LBS
- pay-per-click interface to the billing and payment systems of Schomäcker, InterCard, Sedeco etc. for use in the self-service sector
- scalable solution from single-user to multiuser solution under **MyBib eDoc** with integrated workflow control
